Master Mind

1

```
#include "console.c"
#define COLOR "RGYM"
char secret[5]=COLOR, guess[5]=COLOR;
int sctCount[4], usrCount[4], n=0;
```

```
Enter colors RGYM
Try 1: MMGG      WWW
Try 2: GGYM      BBWW
Try 3: GGYM      BBBB
GGYM
```

```
main(){
    srand(time(NULL));
    setrgb(8); clrscr();
    secret_code();
    do{
        n++;
        guessing(n);
        ok=checkColorPegs();
    }while(!ok && n<10);
    color_display(secret);
}
```

secret="GGYM"
guess="GGYM" BBWW

gets(guess);

1. 產生隨機答案 secret
2. 使用者嘗試去猜 guess
3. 檢查答案及打分 bbww
4. 顯示正確答案 secret

Master Mind

2

```

void guessing(int n){           // 第n次嘗試
    int i;   char c;
    printf("Try %i: ", ...);

    for(i=0; i<4; i++){
        c = getch(); // 輸入1字符

        switch(c){
            case 'R':
            case 'G':
            case 'Y':
            case 'M':
        }

        ...
        printf("%c", c);
        setrgb(0);
    }
    printf("\t");
}

```

gets(guess);

```

setrgb(1); count[?]++; break;
setrgb(2); count[?]++; break;
setrgb(3); count[?]++; break;
setrgb(5); count[?]++; break;

```
